KEVIN KIMANI MWAURA

Technology, Software & Systems Lead

+254 727 596 922 • kevinkimani165@gmail.com • GitHub • Portfolio • Nairobi, Kenya (Open to Remote)

PROFESSIONAL SUMMARY

Hands-on technology lead who designs, builds and runs business systems end to end, and who is equally comfortable writing the code, setting the architecture, or steering clients, colleagues and vendors toward the right solution. Across 6+ years in software engineering, systems integration, fintech and business operations, I have delivered ERP, HR, recruitment, booking and healthcare platforms; integrated CRMs, ERPs, SharePoint, payment rails and third-party APIs; and owned requirements, specifications, QA, releases and documentation. As an independent consultant I scope and deliver custom systems for businesses in Tanzania, advising owners on whether to buy, integrate or custom-build, and on hosting, costs and scalability. I bring a security-first mindset from regulated (PCI and SOC2) environments, practical AI and workflow automation, and a banking background in payments and customer data.

KEY STRENGTHS FOR THIS ROLE

- **Architecture ownership:** design system architecture, data models and integrations across web apps, ERP, CRM and cloud services.
- **Build or lead:** build directly (Next.js, React, Node.js, Python, C#/.NET) or coordinate developers, vendors and stakeholders through phased delivery.
- **Buy vs integrate vs build:** advise on the right approach; for example, recommending a standalone queue app that works alongside a hospital's existing HMS instead of replacing it with a full ERP.
- **Requirements to specifications:** translate business needs into specifications, database designs and SRS documents that developers can deliver against.
- **Quality and reliability:** QA, UAT, release management, monitoring and technical documentation in regulated environments.
- **AI and automation:** LLM integration, document processing (OCR) and workflow automation with alerting.

TECHNICAL SKILLS

Architecture & Backend: Systems design, REST APIs, Node.js, Next.js server actions, C# ASP.NET Core Web API (EF Core), Python (FastAPI, Flask, Frappe), Java (Spring Boot)

Frontend & Mobile: React, Next.js, TypeScript, Tailwind CSS, responsive and accessible UI, React Native (iOS and Android)

Data: PostgreSQL (Neon), SQL Server, MariaDB, Oracle, MongoDB, Redis; Drizzle ORM, schema design, migrations, data audits and backfills

ERP, CRM & Integrations: Frappe/ERPNext, applicant tracking systems, Microsoft Graph / SharePoint, Active Directory, OAuth, email (Resend) and WhatsApp alerting APIs

Payments & Fintech: Payment flows and reconciliation (M-Pesa, RTGS, SWIFT), real-time fraud monitoring, financial reporting

Cloud & Delivery: Vercel, Azure DevOps, Git/GitHub, Docker, CI/CD, staging-to-production releases, environment and secrets management

Security & Privacy: Role-based access control, authentication and password hashing, input validation, PCI and SOC2 practices, data-protection compliance

AI & Automation: LLM integration (LangChain, Google Generative AI), OCR pipelines, AI-assisted development, workflow automation

PROFESSIONAL EXPERIENCE

Independent Software Consultant & Solutions Architect | Freelance | *Nairobi / Dar es Salaam (Remote)* *2025 – Present*

- Scope, architect and deliver custom business systems and websites for clients in Tanzania, from discovery and proposals through demos, phased delivery and handover.

Truck & Trailer ERP — truck importer and repair business, Tanzania — *Next.js, TypeScript, PostgreSQL (Neon), Drizzle ORM, Zod, Vercel*

- Sole architect and developer of a custom ERP covering inventory, procurement, sales and CRM, finance, HR, truck inspections, repairs and photo records, with role-based permissions.
- Prioritised the repair and maintenance workflow as the MVP, demoed it to the owner, and planned phased delivery of the remaining modules.
- Advised the client on production hosting, a company domain and moving to paid tiers for reliability and scale.

Reception Registration & Queue Ticketing — eye hospital, Dar es Salaam — *Web app, Vercel*

- Proposed an ERP, then recommended a standalone reception and queue-ticketing app once it was clear the hospital's existing HMS should stay, avoiding an unnecessary replacement.
- Built and demoed the MVP to hospital management in the hospital's brand colours, with light and dark modes.

Full Stack Developer & Systems Engineer | CCI Global (BPO, PCI & SOC2 regulated) | *Nairobi, Kenya* *Aug 2025 – Present*

- Own HR, recruitment and training platforms for a 1,000+ agent operation, managing work, priorities and releases in Azure DevOps.
- Leading a **Training Room Booking & Management System** (Next.js and TypeScript, ASP.NET Core Web API with EF Core, PostgreSQL) with a colleague: database design presented to stakeholders, shift-based booking rules, and code hosted on company Azure DevOps.
- Built **PeopleOS** (Next.js and FastAPI): HR platform with role-based access control, analytics, bulk data import, automated email notifications and audit logging.
- Built the **Authority to Recruit** platform (ASP.NET Core 8, SQL Server) with multi-level approvals, integrated with Frappe ERP and SharePoint through Microsoft Graph and OAuth.
- Maintain the **CareerBox** candidate portal and ATS on Frappe: root-caused production defects, safely backfilled records, ran end-to-end and UAT testing, scoped integrations with three external platforms, and improved hiring efficiency by 50%+.
- Delivered **CCI Connect**, a React Native app used by 15,000+ employees, plus an Orchard Core CMS site and an Active Directory–integrated campaign app.

Software Developer | E&M Technology House Ltd | *Nairobi, Kenya* *Jan 2024 – Dec 2024*

- Delivered an ERP and financial reporting system for audit teams (Java, Spring Boot, SQL Server), cutting report generation time by 30%.
- Built a Rust real-time fraud-detection service and an AI document assistant (LangChain, Google Generative AI); contributed to the Absa Bank Kenya financial reporting platform.

AI Trainer & Content Evaluator | Remotasks & Outlier | *Remote* *2023*

- Evaluated LLM outputs and model-generated code, and designed quality rubrics.

Cash Relationship Officer | Equity Bank Kenya | *Nairobi, Kenya* *2021 – 2023*

- Handled high-volume payments (M-Pesa, RTGS, SWIFT, Forex) with a zero-error record and met client acquisition targets.

EDUCATION

ALX Software Engineering Programme *2023 – 2025*
Holberton School, USA (Remote) • Graduated with Distinction

Bachelor of Science in Business Information Technology *2017 – 2022*
Mount Kenya University • Second Class Honours

CERTIFICATIONS

- Google Cloud — Generative AI: Introduction to Large Language Models
- Cyber Security Essentials
- HubSpot Operations Management Diploma (In Progress)
